

Charlotte Osborne graduated *magna cum laude* and Phi Beta Kappa from Willamette University in 2011, where she earned her B.A. (Honors) in Chemistry. During her time at Willamette, she worked on the stereocontrolled organocatalytic synthesis of oxacycles in the laboratory of Prof. Andrew Duncan. She was also awarded a Dick Van Santen award from the ACS Portland Section and a Barry M. Goldwater scholarship.

Charlotte earned her Ph.D. in Organic Chemistry from the University of California, Irvine, developing transition metal-catalyzed reactions for the synthesis and subsequent biological evaluation of enantioenriched diarylalkanes. She was awarded an NIH Ruth L. Kirschstein Predoctoral Fellowship to complete her research in the laboratories of Prof. Elizabeth Jarvo and Prof. Naomi Morrisette.

After realizing her passion for scientific writing, she transitioned from the bench to the keyboard and now works as a medical writer. Charlotte lives in Seattle with her husband.
