

Micah Donor graduated *summa cum laude* from George Fox University with a B.S. in Chemistry in 2014. While at George Fox he conducted research with Dr. Carlisle Chambers, working on synthesizing a fluorophore that could be conjugated to silver nanoparticles.

Micah is attending the University of Oregon for his PhD, working with Dr. Jim Prell on developing methods for understanding the structure and energetics of proteins in the gas phase using native ion mobility-mass spectrometry. In 2016 Micah was awarded a Graduate Research Fellowship from the National Science Foundation. He has published four peer-reviewed papers and he has given multiple presentations at national and regional conferences.

In June 2018, Micah married Tai Heinzerling, a PhD student studying Neuroscience at the University of Oregon.
